Título: **Economic resilience under the Indo-Pacific economic framework supply chain agreement: treading between geoeconomic ambitions and world trade organization compatibility?**

Autor: Delev, Christian

Revista: World Trade Review

Editorial: Cambridge core

Fecha: June, 2025

DOI: <https://doi.org/10.1017/S1474745625000084>

Resumen:

The resilience of international supply chains is increasingly becoming a policy objective within international trade law making. Unilaterally, States have resorted to a myriad of trade tools to achieve this objective, including subsidizing domestic industries, facilitating critical minerals, and imposing tariffs on dominant supplying States to encourage supply diversification. In this context, the Indo-Pacific Economic Framework for Prosperity Supply Chain Agreement is the first major international trade agreement primarily aimed at achieving regional supply chain resilience. This Research Note explores the WTO compatibility of the economic interventions that underpin the Supply Chain Agreement's 'managed trade' approach to supply chain resilience...

Título: **International finance and the geopolitics of market infrastructures**

Autor: Saguato, Paolo

Revista: Journal of International Economic Law

Editorial: Springer Nature Link

Fecha: November, 2025

DOI: <https://doi.org/10.1093/jiel/jgaf042>

Resumen:

This article examines how financial market infrastructures (FMIs)—long regarded as neutral, technocratic utilities—have become instruments of geopolitical influence and economic statecraft. Drawing on three case studies—SWIFT (the Society for Worldwide Interbank Financial Telecommunication) sanctions, EU–UK post-Brexit equivalence disputes, and the EU’s withdrawal of FMI recognition for India, South Africa, and the United Arab Emirates—this article shows how FMIs are increasingly ‘weaponized’ as tools of financial diplomacy. It argues that mutual recognition and equivalence regimes, originally designed to foster cross-border regulatory coordination and financial stability, have evolved into levers of jurisdictional power. These mechanisms now serve both ‘offensive’ purposes (such as sanctions) and ‘defensive’ strategies (such as re-shoring euro clearing), revealing their political and discretionary nature...

Título: **Mapping corporate investments between China and Europe in an era of geoeconomic competition**

Autor: Babic, Milan; Linsi, Lukas

Revista: JCMS: Journal of Common Market Studies

Editorial: Wiley Online

Fecha: August, 2025

DOI: <https://doi.org/10.1111/jcms.13672>

Palabras clave del artículo

Resumen:

The consolidation of geo-economic competition puts core aspects of global economic interdependence, such as the mutual China-EU investment relationship, under increased pressure. Headlines about 'derisking', 'decoupling' or 'deglobalization' dominate current debates but tend to be overly simplistic. To push the debate on China-EU economic relations forward, we provide an empirically driven account of the first phase of the global geo-economic turn between 2009 and 2021. By triangulating country-level FDI data, firm-level ownership information and firm-level surveys, we find indications of geopolitical hedging by European and Chinese firms, but no clear move towards decoupling or deglobalization. Based on our findings, we advocate for an approach that takes the complexity of state-firm interactions in global economic relations seriously and integrates different data sources and levels of analysis. With this, we hope to contribute to a more realistic and fine-grained approach to the important question of China-EU relations in the 21st century.

Título: **What can the environmental state actually do? Three critiques and their limits**

Autor: Babić, Milan; Christesen, Caroline Ahler; Hasselbalch, Jacob

Revista: Global Environmental Politics

Editorial: Wiley Online Library

Fecha: September, 2025

DOI: <https://doi.org/10.1162/GLEP.a.18>

Palabras clave del artículo

Resumen:

Three critiques of the environmental state shape the discussion of its possibilities and limits. First, states are deemed structurally unable to mitigate climate change due to the "glass ceiling" of systemic transformations. Second, governments play contradictory roles in sustainability transitions because of the manifold societal demands they are facing in an age of overlapping crises. Finally, state bureaucracies and agencies are often branded "lame ducks" that prefer to uphold the status quo and stall sustainability transformations. We argue that those critiques describe important but not ultimate limits for the environmental state to reach at least Paris-aligned decarbonization targets by mid-century. On the contrary, bureaucratic agency, specialization, and coordination offer real possibilities for state-led decarbonization beyond the limits of existing environmental governance...

ECONOMÍA Y FINANZAS

Atlas of finance: mapping the global story of money

Wójcik, Dariusz; Iliopoulos, Panagiotis; Ioannou, Stefanos; Keenan, Liam; Migozzi, Julien; Monteath, Timothy; Pažitka, Vladimír; Torrance, Morag; Urban, Michael

Yale University Press, 2024.

BA unique illustrated exploration of the development of finance that combines data from every part of the world and covers five thousand years of history/BBR / BR / From the emergence of money in the ancient world to today's interconnected landscape of high-frequency trading and cryptocurrency, the story of finance has always taken place on an international stage. Finance is one of the most globalized and networked of human activities, and one of the most important social technologies ever invented.BR / BR / This volume, the first visually based book dedicated to finance, uses graphics and maps to bring the complex and abstract world of finance down to earth, showing how geography is fundamental for understanding finance, and vice versa. It illuminates the people-including Adam Smith, Karl Marx, and John Maynard Keynes-who have shaped our thinking about global finance; brings to life the ways that place-specific histories, laws, regulations, and institutions influence finance; shows how finance relates to innovation, globalization, and environmental change...

A climate of truth: why we need it and how to get it.

Berners-Lee, Mike

Cambridge University Press, 2025.

We have most of the technology we need to combat the climate crisis - and most people want to see more action. But after three decades of climate COPs, we are accelerating into a polycrisis of climate, food security, biodiversity, pollution, inequality, and more. What, exactly, has been holding us back? Mike Berners-Lee looks at the challenge from new angles. He stands further back to gain perspective; he digs deeper under the surface to see the root causes; he joins up every element of the challenge; and he learns lessons from our failures of the past. He spells out why, if humanity is to thrive in the future, the most critical step is to raise standards of honesty in our politics, our media, and our businesses. Anyone asking 'what can each of us do right now to help?' will find inspiration in this practical and important book.

The data economy: tools and applications

Baley, Isaac; Veldkamp, Laura

Princeton University Press, 2025

Tools from macroeconomics and finance to incorporate the central role that data plays in the economy. The most valuable firms in the global economy are valued largely for their data. Amazon, Apple, Google, and others have proven the competitive advantage of a good data set. And yet despite the growing importance of data as a strategic asset, modern economic theory neglects its role. In this book, Isaac Baley and Laura Veldkamp draw on a range of theoretical frameworks at the research frontier in macroeconomics and finance to model and measure data economies. Starting from the premise that data is digitized information that facilitates prediction and reduces uncertainty, Baley and Veldkamp uncover the ways that firm-level data choices resonate throughout the broader macroeconomic and financial landscapes. With *The Data Economy*, Baley and Veldkamp put forward a broad research agenda with a formal yet accessible approach, offering an analysis of the data economy and its welfare effects that will be of interest to practitioners, researchers, and graduate students...

International economics

Menzie D., Chinn; Douglas A. Irwin

Cambridge University, 2025

The globalized world economy is more important than ever before. This book provides a clear and up-to-date look at the economic foundations of international economics. Through accessible language and attractive presentation with abundant full-colour diagrams and graphs incorporating contemporary trade data, the authors explain the principal concepts in an engaging manner open to students from any discipline. Throughout, economic models are discussed in the context of recent and current international trade issues to ensure students gain a concrete understanding and see how the field impacts the real world. Written for upper undergraduate courses, the book includes feature boxes that marry theory and economics in practice to show models applied, a featured real-world application for every chapter, and over 240 end of chapter questions help students fully engage with and consolidate their learning. Online resources for instructors include a solutions manual, lecture slides and the book figures as jpgs.

The ordinary business of life a history of economics from the ancient world to the twenty-first century

Backhouse, Roger E.

Princeton University, 2024.

Hesiod defined the basic economic problem as one of scarce resources, a view still held by economists today. Diocletian tried to save the Roman Empire with wage and price fixes—a strategy that has not gone entirely out of style. Roger Backhouse takes readers from the ancient world to the frontiers of game theory, mechanism design, and engagements with climate science, presenting an essential history of a discipline that economist Alfred Marshall called "the study of mankind in the ordinary business of life". Backhouse introduces the many fascinating figures who have thought about money and markets down through the centuries—from philosophers and theologians to politicians and poets—and shows how today's economic ideas have their origins in antiquity. This updated edition of *The Ordinary Business of Life* includes a new chapter on contemporary economics and the rest of the book has been thoroughly revised.

The quantity theory of money a new restatement

Congdon, Tim

Institute of Economic Affairs, 2024

As Covid-19 hit the world's leading economies, most economists – in central banks and elsewhere – expected years of disinflation or even falling prices. To counter the supposed risks, policy-makers embarked on expansionary measures which caused money growth to reach remarkably high rates in spring and summer of 2020. In the event inflation soared in the next few quarters. In 2022 it reached the highest levels for 40 years in the USA, Europe, the UK and elsewhere. In this bold new book Congdon laments the widespread forecasting failure. From the very start – in late March 2020 – he warned both that rapid money growth was to be expected and that it would lead to a serious inflation flare-up. In rigorous but accessible language, Congdon explains the continuing analytical power of the quantity theory of money. As with other inflation episodes in the past, the inflation of the early 2020s demonstrated the force of Milton Friedman's dictum that 'inflation is always and everywhere a monetary phenomenon.'

INVESTIGACIÓN

Becoming a social science researcher quest and context

Parrot, Bruce

Harvard Business Review Press, 2025

Becoming a Social Science Researcher is designed to help aspiring social scientists, including credentialed scholars, understand the formidable complexities of the research process. Instead of explaining specific research techniques, it concentrates on the philosophical, sociological, and psychological dimensions of social research. These dimensions have received little coverage in guides written for social science researchers, but they are arguably even more important than particular analytical techniques. Truly sophisticated social science scholarship requires that the researcher understand the intellectual and social contexts in which they collect and interpret information. While social science training in US graduate schools has become more systematic over the past two decades with numerous publications aimed at instruction, training and guidance still fall short in addressing the fundamental needs of this field.

Ethics and experiments: problems and solutions for social scientists and policy professionals

Desposato, Scott

Routledge, 2016

For most of political science's history, discussions about professional ethics had nothing to do with human subjects. Professional ethics involved integrity in the classroom, fair tenure and promotion rule, and the careful avoidance of plagiarism. As most research was observational, there was little need for attention to how scholarly activities might directly affect the subjects of our work. Times have changed. The dramatic growth in the use of experiments in social science, especially overseas, is generating unexpected ethical controversies. The purpose of this volume is to identify, debate, and propose practical solutions to the most critical of these new ethical issues. A leading team of internationally distinguished political science scholars presents the first examination of the practical and ethical challenges of research with human subjects in social science and policy studies. Part 1 examines contextual challenges provided by experiments conducted overseas - questions of culture, religion, security, and poverty. Part 2 examines questions of legal constraints on research, focusing on questions of foreign review of international experiments...
