Título: **Beyond the basics: a longitudinal study of financial literacy development in young women alumni of the invest in girls program**

Autor: Park, C.; Howard, K.; Solberg, V.

Revista: Future Business Journal

Editorial: Springer Nature Link

Fecha: August, 2025

DOI: <https://doi.org/10.1186/s43093-025-00620-9>

Resumen:

This longitudinal qualitative study examines the impact of the Invest in Girls (IIG) financial literacy program on young women's financial knowledge, behavior, and skills in the USA. We conducted 98 interviews over four years with program alumnae and analyzed the data using thematic analysis. The study reveals a clear progression in financial literacy skills as participants transitioned from high school through college. Key findings include the evolving importance of budgeting skills—from basic tracking methods to sophisticated digital tools—a progression from basic financial concepts to complex real-world applications, and a persistent need for practical, in-depth tax education. The study highlights the importance of adapting financial literacy programs to meet young women's changing developmental needs. These insights inform the design of developmentally appropriate financial literacy programs that can respond to participants' evolving educational needs...

Título: **Culture, preferences, and the gender gap in financial literacy**

Autor: Davoli, M.; Rodríguez-Planas, N.

Revista: Journal of Financial Literacy and Wellbeing

Editorial: Cambridge Core

Fecha: August, 2025

DOI: <https://doi.org/10.1017/flw.2025.10001>

Resumen:

Using a nationally representative US sample of 9,623 adults from 26 countries of ancestries, we investigate the role of culture in explaining the gender gap in financial literacy. We find that (i) the smaller the gender gap in financial literacy in the country of ancestry, the higher the financial understanding of women in the US relative to men and (ii) higher patience and lower altruism in the country of ancestry are associated with greater financial literacy in the US for men but not women. Even after controlling for gender variation in these preferences, country-of-ancestry gender gap in financial literacy remains strongly associated with women's higher financial literacy, especially for knowledge of inflation and risk diversification...

Título: **Data visualization for improving financial literacy: A systematic review**

Autor: Du, M.; Amor, R.; Ma, K.; Wünsche, B. C.

Revista: Visual Informatics

Editorial: Science Direct

Fecha: March 2026

DOI: <https://doi.org/10.1016/j.visinf.2025.100272>

Resumen:

Financial literacy empowers individuals to make informed and effective financial decisions, improving their overall financial well-being and security. However, for many people understanding financial concepts can be daunting and only half of US adults are considered financially literate. Data visualization simplifies these concepts, making them accessible and engaging for learners of all ages. This systematic review analyzes 37 research papers exploring the use of data visualization and visual analytics in financial education and literacy enhancement. We classify these studies into five key areas: (1) the evolution of visualization use across time and space, (2) motivations for using visualization tools, (3) the financial topics addressed and instructional approaches used, (4) the types of tools and technologies applied, and (5) how the effectiveness of teaching interventions was evaluated...

Título: **Family financial education and financial management behavior among Generation Z: integrating the theory of planned behavior and technology acceptance model to explore the importance of financial literacy and locus of control**

Autor: Hasan, M.; Asriani, Ahmad; M. I. S.; Supatminingsih, T.; Dinar, M.; Sangkala, M.; Rahim, A.; Hasyim, S. H.; Idris, H.

Revista: Cogent Education

Editorial: Taylor & Francis

Fecha: May, 2025

DOI: <https://doi.org/10.1080/2331186X.2025.2510067>

Resumen:

The development of the globalization era has driven economic progress across countries, which impacts how individuals manage their finances to achieve financial well-being. Mediated by financial literacy and locus of control, this study aims to investigate the relationship between family financial education and financial technology with the financial management behavior of Generation Z. This study uses a quantitative approach. Data were obtained from 700 Generation Z student respondents who were determined using the proportional stratified random sampling technique. The analysis in this study used structural equation modeling with partial least squares (SEM-PLS)...

The art of monetary policy: lessons from Sun Tzu for central banks

Forbes, Kristin

The MIT Press, 2026

Strategic lessons for monetary policy from the last two tumultuous decades based on insights from Sun Tzu, the Chinese philosopher and author of The Art of War. When central banks were forced to innovate and develop a multifaceted set of new weapons in response to the 2008 global financial crisis and 2020 COVID-19 pandemic, the result was a substantial expansion in their authority and reach. In The Art of Monetary Policy, Kristin Forbes draws lessons for monetary policy of the last two decades from the principles of Sun Tzu, the author of The Art of War, a Chinese philosopher and military strategist from the fifth century BC. Tzu proposed several key principles for success—tenets that apply to monetary policy and the battlefield today: (1) plan in advance for the next battle; (2) accept and adapt to the inevitability of powerful, external shocks outside your control; (3) establish a strong tactical position; (4) develop a variety of weapons that can be combined for different maneuvers and situations; (5) maintain flexibility so that you can...

Asymptotics for fractional processes

Davidson, James

Oxford Academic, 2025

The object of this book is to develop an approach to the large-sample analysis of fractional partial-sum processes, featuring long memory increments. Long memory in a time series, equivalently called strong dependence, is defined to mean that the autocovariance sequence is nonsummable. The processes studied have a linear moving average representation with a single parameter, denoted, to measure the degree of long-run persistence. Long memory means that, while defines a special type of short memory known as antipersistence. Antipersistent processes are treated in parallel with the long memory case. Topics treated include the weak convergence of normalized partial sums to fractional Brownian motion and the limiting distribution of stochastic integrals where both the integrand and the integrator processes exhibit either long memory or antipersistence. The results are proved both for the case of independent shock processes and under the assumption of nonparametric weak dependence. Applications of the results to regression and cointegration analysis are explored...

La economía mexicana en transición, 2000-2023

Mejía Reyes, P.; Ovando Aldana, W.; Rivera Rojo, C. R.

Universidad Autónoma del Estado de México (México) Facultad de Economía., 2024

Desde mediados de los años ochenta la economía mexicana transitó por un modelo de desarrollo basado en una economía abierta y de mercado, que no generó el crecimiento económico esperado ni revirtió añejos problemas de pobreza y desigualdad. Para enfrentar estos retos, a partir de 2018 se adoptó un modelo que ha enfatizado el bienestar social, lo que ha demandado una mayor participación del Estado, pero manteniendo los pilares del modelo anterior. En este contexto, el presente libro contrasta el comportamiento de las principales variables económicas durante los últimos cuatro sexenios presidenciales, destacando sus efectos sobre el mercado laboral y diferentes medidas de bienestar social y enfatizando el papel del Estado en esta nueva estrategia de desarrollo. Los capítulos contenidos en la presente obra, buscan ofrecer análisis objetivos de los diferentes fenómenos que preocupan a funcionarios públicos, políticos, empresarios, trabajadores, académicos y a toda la sociedad...

Elements of structural equation models (SEMs)

Bollen, K. A.

Cambridge University Press., 2026

Elements of Structural Equation Models (SEMs) blends theoretical foundations with practical applications, serving as both a learning tool and a lasting reference. Synthesizing material from diverse sources, including the author's own contributions, it provides a rigorous yet accessible guide for graduate students, faculty, and researchers across social, behavioral, health, and data sciences. The book covers essential SEM concepts – model assumptions, identification, estimation, and diagnostics – while also addressing advanced topics often overlooked, such as Bayesian SEMs, model-implied instrumental variables, and categorical variables. Readers will gain insights into missing data, longitudinal models, and comparisons with Directed Acyclic Graphs (DAGs). By presenting complex technical content in a clear, structured way, this authoritative resource deepens readers' understanding of SEMs, making it an indispensable guide for both newcomers and experts seeking a definitive treatment of the field.

Expectations matter: the new causal macroeconomics of surveys and experiments

Coibion, Olivier; Gorodnichenko, Yuriy

Princeton University, 2026

What people believe about the economy—and why it matters. How do expectations about the future influence economic behavior? For decades, economists have known that beliefs play a central role—from how much households spend, to how firms set prices, to how central banks design policy. But figuring out exactly how expectations affect decisions has been one of the field's most persistent empirical challenges. In this book, Olivier Coibion and Yuriy Gorodnichenko present a fresh empirical approach: using randomized controlled trials (RCTs) to study the causal impact of expectations. Drawing on more than a decade of their research, they show how targeted information treatments can generate experimental variation in beliefs—making it possible to measure how those beliefs influence real-world decisions. Along the way, they reassess the limits of the traditional rational expectations framework and offer a richer, evidence-based picture of how people form and act on their views about the economy...

History, memory, and the return of financial crises after Bretton Woods

Youssef, Cassis; Telesca, Giuseppe

Oxford Academic, 2026

This book deals with the currently most relevant topics in price index numbers theory and practice. The problem of the harmonization of Consumer Price Indexes (CPIs) and the time-space integration of baskets is analyzed at the EU-zone level, with methodological and practical proposals on how to proceed for an overall treatment of the matter. Another issue is comparisons between Purchasing Power Parities (PPPs) and CPIs. Likewise, the construction of sub-indexes for households, economic and social groups is investigated, in order to obtain specific inflation measurement instruments. The book provides evidence from the most updated databases. Among the other issues treated in this book are spatial comparisons of price levels through PPPs and the international comparisons of macroeconomic aggregates, a re-consideration of index numbers theory, the measurement of production in non-market services, deflation problems, and price indexes in financial markets.

The new economic nationalism

Cohen-Setton, Jérémie; Sarsenbayev, Madi; Bolle, Monica de
Peterson Institute for International Economics, 2025

Empires, city states, and nations have long pursued aggressive trade, tax, and investment policies to amass wealth. A new consensus emerged after the Great Depression and World War II supporting liberalized international trade, economic cooperation, and free markets. Today that consensus has shattered, replaced by a "new economic nationalism" of industrial policy, tariffs, and various methods of state support for the economy. Can this new approach deliver stability, national security, and prosperity? This book examines case studies revealing a decidedly mixed record. In some instances, economic nationalist policies have fostered growth and declining unemployment, though accompanied by fiscal costs and inefficiency. In much of the developing world, however, economic nationalist policies have produced corruption, debt burdens, inflation, and ultimately stagnation. By examining the past, The New Economic Nationalism provides a roadmap to an uncertain future.

Shared prosperity in a fractured world: a new economics for the middle class, the global poor, and our climate

Rodrik, Dani.

Princeton University Press, 2025

New, practical approaches to confronting today's most daunting global issues. Fighting climate change, saving democracy, and eradicating poverty are urgent global challenges, yet the world's leaders continue to pursue outdated policies that focus on one while worsening the tradeoffs between each of them. Shared Prosperity in a Fractured World shows how the nations of the world can achieve all three objectives. Dani Rodrik provides a bold new vision of globalization, one in which we accelerate the green transition to achieve a sustainable planet, shore up the middle class to restore democracy's foundations, and hasten economic revitalization in the developing world to put an end to poverty. The rising tide of authoritarianism has demonstrated our inability to alleviate economic anxieties. Economic nationalism has raised the specter of increased protectionism and deteriorating prospects for economic growth. And automation and other new technologies have undercut the advantages of low-cost, unskilled labor in manufacturing and export-oriented industrialization...
